Searching multiple EbscoHost journal databases simultaneously:

Start by selecting Academic Search -- EbscoHost’s largest and most general database. This database is frequently included within many Library Guides and is also accessible via many other library web pages. One easy place to start is from the Library Home Page: [www.uwm.edu/libraries](http://www.uwm.edu/libraries)

Hover over the Libraries ‘Search & Find’ and select the ‘Databases A-Z’ list:

Select ‘Academic Search Complete’ from under the ‘A’ designation:
Click on the ‘Choose Databases’ link:

Check the databases that you’d like to search. In this example, you’d be searching 3 Ebsco databases simultaneously: Academic Search Complete, Art Full Text and Avery Index to Architectural Periodicals. After you’ve selected your databases, click on the yellow ‘OK’ button:
NOTE: If you don’t know all of the databases that you’d like to search, click on the ‘Detailed View’ link to read the ‘scope note’ for each individual database and make your selections from this list by checking the boxes next to the databases.

Choose Databases

Detailed View (Title lists included) Select another EBSCO service

☐ Select / deselect all

OK  Cancel

Then you’ll see the scope notes for each database, as shown below:

After selecting your databases, search as usual using either the Basic or Advanced search functionality:
